1. Presentation

The BMS-IFMB0TLR-E interface allows a complete and natural integration of Toshiba air conditioners into Modbus RTU (RS-485) networks.

The BMS-IFMB0TLR-E is compatible with the Toshiba Remote controller AB lines.

- Reduced dimensions. 90(93) x 53 x 58 mm.
- Quick and easy installation.
Mountable on DIN rail, wall
- External power not required.
- Direct connection to Modbus RTU (RS-485) networks.
BMS-IFMB0TLR-E is a Modbus slave device.
- Direct connection to the Indoor unit.
- Configuration from both on-board DIP-switches and Modbus RTU.
- Total Control and Supervision.
- Allows using simultaneously the Remote Controller and Modbus RTU.

2. Installation instructions

- Disconnect the Air-conditioning from Mains Power.
- Fix the interface beside the Air-conditioning (wall mounting) following the instructions in the diagram below or install it inside the Air-conditioning (respect the safety instructions given above).
- Connect the interface to A B bus in any point of the bus. The A B bus is the bus that connects the Indoor unit and the wired remote controller, is a two-wire bus connecting terminals A B of both, this A B connection has no specific polarity.
- Connect the RS-485 bus to the connector RS-485 of the interface.
- Close the Indoor unit and reconnect it to Mains Power.
- Follow the instructions on the user manual for configuring and commissioning the interface.
- Follow the instructions of the next page to configure the interface through on-board DIP-switches.

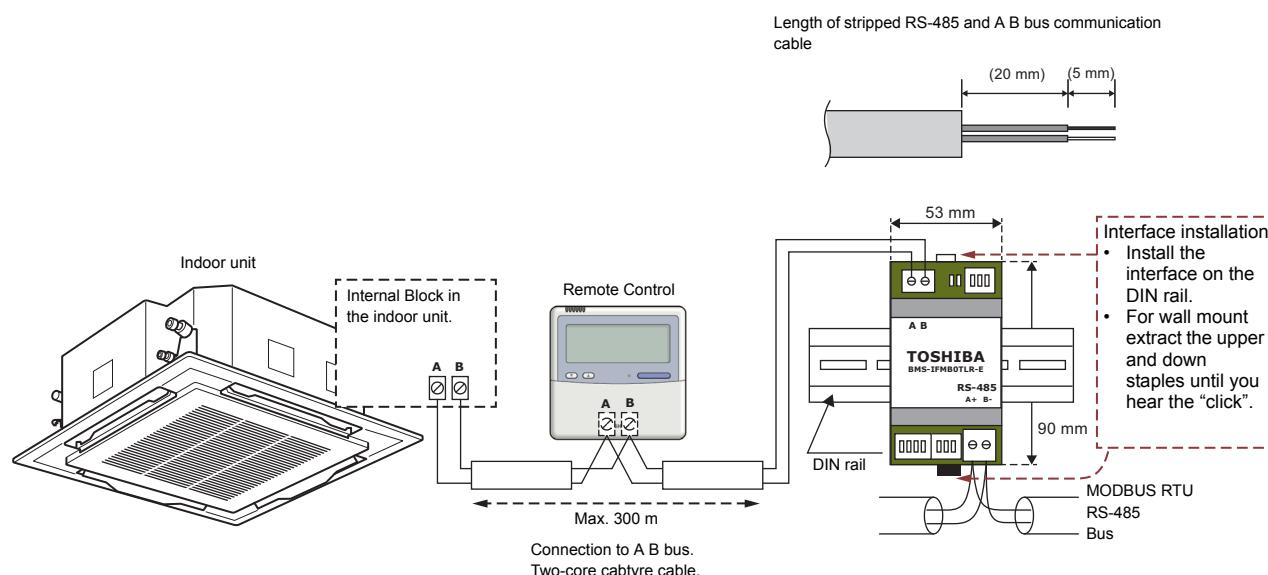

NOTE

The cable used for connection of BMS-IFMB0TLR-E to A B bus can be any two-core cabtyre cable, the maximum distance for bus A B is 300 meters, consult the manual of the Air-conditioning for more details.

Respect the maximum distance of 500 meters for the bus, no loop or star topologies are allowed for RS-485 bus, a terminator resistor of 120Ω must be present at each end of the bus to avoid signal reflections and also a fail-safe biasing mechanism.

IMPORTANT:

- Use only one remote controller. A sub-remote controller cannot be connected when connecting this interface.

NOTE

In its place there is a pair of cables to connect the Remote Controller. Use these cables to connect the AB bus. Check your Air-Conditioning user or service manual for more information.

3. Modbus Interface Specification

3.1 Modbus physical layer

BMS-IFMB0TLR-E implements a Modbus RTU (slave) interface, to be connected to an RS-485 line. It performs 8N2 (8N1-compatible) communication (8 data bits, no parity and 2 stop bit) with several available baud rates (2400 bps, 4800bps, 9600 bps -default-, 19200 bps).

The relationship between the start address specified in a request from the master device and the value shown by “Modbus-address for registers” in the address assignment table is as follows:

For Holding Register

Start address = (Value of Modbus-address for registers) – 40001

3.2 Modbus Registers for Standard Functions

All registers are of type “16-bit signed Holding Register”, in standard Modbus’ big endian notation.

3.2.1 Indoor Unit Control and Status Registers

Addr	R/W	Item	
40001	R/W	AC On/Off	0-OFF, 1-ON

40216	R	Fan 5 Speed Function Status	0-Invalid, 1-Valid
40217	R	Save Function Status	0-Invalid, 1-Valid
40218	R	Louver Function Status	0-Invalid, 1 or more- Valid

(*)1) Temperature data °C x1 (S4 Bit1 OFF) / x10°(S4 Bit1 ON)

3.2.3 Configuration Registers

Addr	R/W	Item	
40041	R	Modbus baud rate	0-2400bps 1-4800bps 2-9600bps 3-19200bps
40042	R	Modbus Slave Address	1 to 63
40050	R	Device Definition	0x2800
40051	R	Software Version	

3.2.4 Implemented Functions

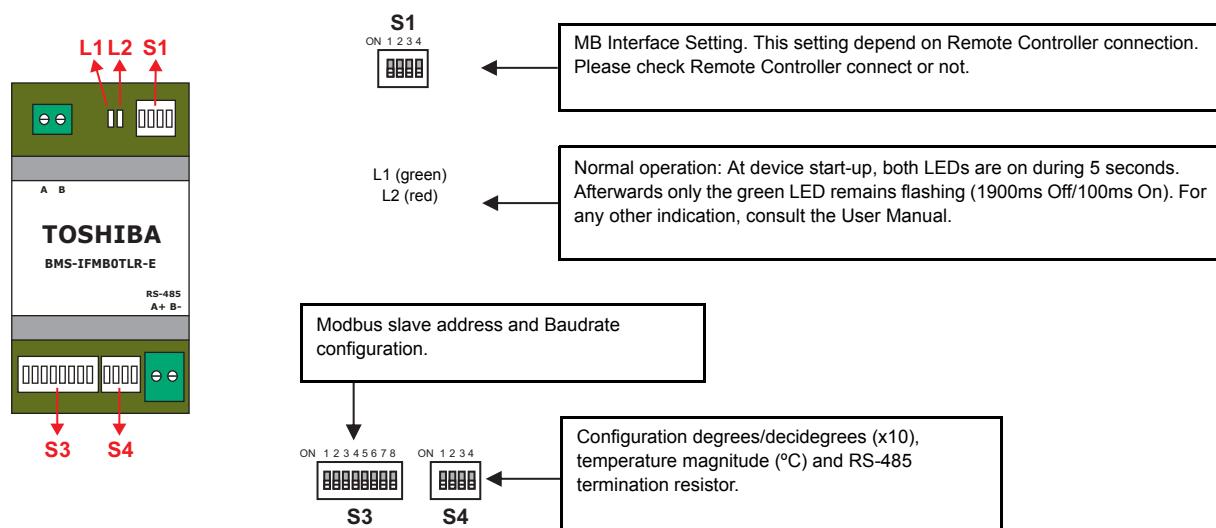

BMS-IFMB0TLR-E implements the following standard Modbus functions:

- 3: Read Holding Registers
- 6: Write Single Register
- 16: Write Multiple Registers (Although this function is allowed, the interface does not allow write operations on more than 1 register with the same request, this means that length field should always be 1 when using this function for writes)

3.3 Configuration through micro switches

All configuration values on BMS-IFMB0TLR-E can be written and read from Modbus interface. Though, some of them can also be setup from its on-board DIP-switch interface.

They are DIP-switches S1*, S3* and S4 on the device, in the following location:

The following table applies for configuration of the interface through these DIP-switches:

S1 - MB Interface Setting

Switches 1 2 3 4	Description
↓ x x x	Connect Wired Remote Controller and/or Wireless Remote Controller (default setting)
↑ x x x	Not Connect Wired Remote Controller and Wireless Remote Controller.
x ↑ x x	Reserve.
x x ↑ x	Reserve.
x x x ↑	Reserve.

S3 - Modbus slave address and baudrate

Add	Switches 1 2 3 4 5 6	Add	Switches 1 2 3 4 5 6	Add	Switches 1 2 3 4 5 6	Add	Switches 1 2 3 4 5 6
0	↓ ↓ ↓ ↓ ↓ ↓	16	↓ ↓ ↓ ↓ ↑ ↓	32	↓ ↓ ↓ ↓ ↓ ↑	48	↓ ↓ ↓ ↓ ↑ ↑
1*	↑ ↓ ↓ ↓ ↓ ↓	17	↑ ↓ ↓ ↓ ↑ ↓	33	↑ ↓ ↓ ↓ ↓ ↑	49	↑ ↓ ↓ ↓ ↑ ↑

15	↑ ↑ ↑ ↑ ↓ ↓	31	↑ ↑ ↑ ↑ ↑ ↓	47	↑ ↑ ↑ ↑ ↓ ↑	63	↑ ↑ ↑ ↑ ↑ ↑

* Default value

Switches 7 8	Description
↓ ↓	2400bps
↑ ↓	4800bps
↓ ↑	9600bps (default value)
↑ ↑	19200bps

S4 - Degrees/Decidegrees (x10), temperature magnitude (°C) and RS-485 termination resistor

Switches 1 2 3 4	Description
↓ x x x	Temperature values in Modbus register are represented in degrees (x1) (default value)
↑ x x x	Temperature values in Modbus register are represented in decidegrees (x10)
x x x ↓	RS-485 bus without termination resistor (default value)
x x x ↑	Internal termination resistor of 120Ω connected to RS-485 bus *

* Only in the interfaces conected at both ends of the bus must be activated the termination resistor, not in the rest. The RS-485 bus can be biased through internal jumpers JP2 and JP3. Consult the user manual for details.

3.4 Device LED indicator

The device includes two LED indicators to signal its different possible operational states.

In this section their meaning is explained

L1 (yellow)			
Operation	ON	OFF	Meaning
Blinking	500 ms	500 ms	Communication error
Flashing	100 ms	1900 ms	Normal operation (configured and working)
L1 (green) & L2 (red)			
Operation	ON	OFF	Meaning
Pulse	5 sec	--	Device start-up
Alternate blinking	500 ms	500 ms	EEPROM failure

3.5 RS-485 bus. Termination resistors and Fail Safe Biasing mechanism

RS-485 bus requires a 120Ω terminator resistor at each end of the bus to avoid signal reflections.

In order to prevent fail status detections by the receivers “listening” the bus when all the transmitters outputs are in three-state(high impedance), it is also required a fail-safe biasing mechanism. This mechanism provides a safe status (a correct voltage level) in the bus when all the transmitters’ outputs are in three-state.

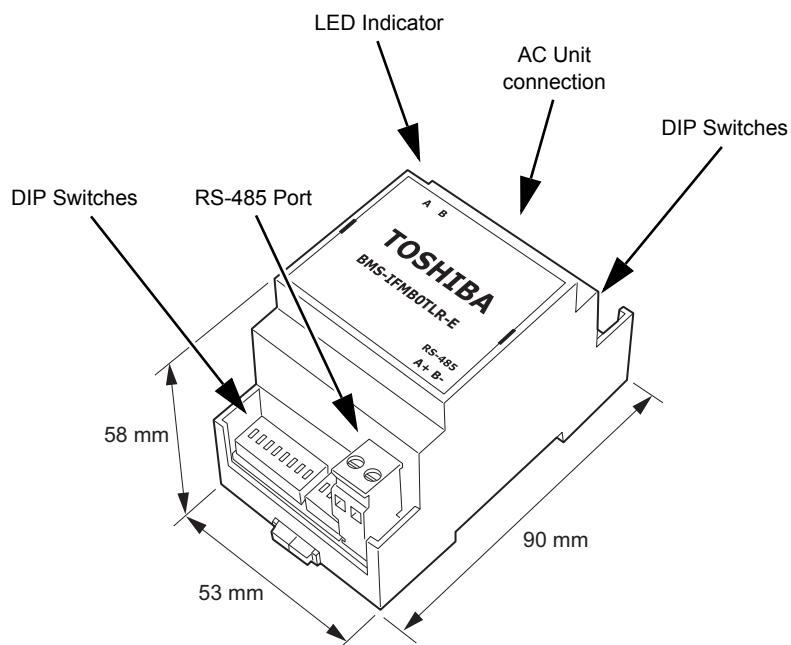

The BMS-IFMB0TLR-E device includes an on-board terminator resistor of 120Ω that can be connected to the RS-485 bus by using DIP-switch S4 Bit4, ON : 120Ω , OFF : without terminal register.

Fail safe biasing of the RS-485 bus must only be supplied by one of the devices connected to the bus. The device providing fail safe biasing or terminator resistor should be the one connected at one end of the bus. At the other end of the bus, if there is also a BMS-IFMB0TLR-E device, select the 120Ω terminator resistor through DIP-switch P5, or if there is a master device not providing internal 120Ω terminator resistor, connect an external 120Ω resistor in the bus terminal block connection of such master device.

Some Modbus RTU RS-485 master devices can provide also internal 120Ω terminator resistor and/or fail safe biasing (consult the technical documentation of the master device connected to the RS-485 network in every case).

4. Specifications

Dimensions:	90(93) x 53 x 58 mm
Weight:	85 g
Operating Temperature:	0 . . . 40°C
Stock Temperature:	0 . . . 40°C
Operating Humidity:	<95% RH, non-condensing
Stock Humidity:	<95% RH, non-condensing
Isolation voltage:	1500 VDC
Isolation resistance:	1000 MΩ
Modbus Media:	Compatible with Modbus RTU – RS-485 networks

5. Precautions

5.1 Restrictions for Use in Combination with Wired Remote Controller

When use RBC-AMS5* Remote Controller, You cannot connect the following air-conditioner.

Type	Model
1-way Air Discharge Cassette Type	MMU-AP***4YH1
Concealed Duct High Static Pressure Type	MMD-AP***4H,-E
Floor Standing Concealed Type	MML-AP***4BH1,-E
Floor Standing Cabinet Type	MML-AP***4H1,-E
Floor Standing Type	MMF-AP***4H,-E
Fresh Air Intake Indoor unit Type	MMD-AP***1HFE
Air to Air Heat exchanger with DX-coil Type	MMD-VN***2HEX1E
Hot Water Module	MMW-AP****LQ-*

5.2 When Remote Controller Not Installed

Set bit 1 of the S1 switch of TCB-IFMB0TLR-E to ON and then supply power to the indoor unit.
In the case of a wall mounted model, there is no remote controller so bit 1 of the S1 switch needs to be ON.

Example

- Wired Remote Controller (sold separately) is not installed.
- Receiver unit of wireless remote controller (sold separately) is not installed.
- Indoor unit is wall mounted type

5.3 “Permit/Prohibit of local” Setting

If the power of an indoor unit is interrupted after “Prohibit of local” is set, the setting of the indoor unit becomes “Permit of local” so set “Prohibit of local” again.

5.4 Louver Setting

If the louver of an indoor unit is set from the TCB-IFMB0TLR-E, the master device and slave device will be set to the same louver setting. The same applies in the case of a 4-way louver.

5.5 Auto-Cooling/Auto-Heating setpoint

If auto-cooling setpoint \geq auto-heating setpoint, the setting values of auto-cooling setpoint and auto-heating setpoint are transmitted to an indoor unit. If auto-cooling setpoint $<$ auto-heating setpoint, they are disabled.

5.6 When Value of Alarm Code Continues to Be (-4)-initialization

If communication with the outdoor unit is not possible when power is supplied to an indoor unit, the alarm status of the TCB-IFMB0TLR-E will be 1-Alarm, and the alarm code may continue to be (-4)- initialization. Supply power to the outdoor unit. When the value of the alarm code is (-4)-initialization, even if the value of the Modbus register (40001 to 40018) is changed, the command to change the operation state will not be transmitted to the indoor unit.

6. Check Code

Check code		Alarm Unit	Alarm Description
Hexadecimal Number	Remote Controller Display		
00	A00	-	No error
01	A01	Indoor unit	Flow switch operation error
02	A02	Indoor unit	Water temperature decrease error
04	A04	Indoor unit	Activation of water heat exchanger frost protection
06	A06	Indoor unit	Ignition failed
1B	A27	Indoor unit	Abnormal increase at temperature sensor for refrigerant heating outlet

EC	P12	Indoor unit	Indoor fan motor error
ED	P13	Outdoor unit	Outdoor liquid back detection error
EF	P15	Outdoor unit	Gas leak detection
F1	P17	Outdoor unit	Discharge temp. TD2 error
F2	P18	Outdoor unit	Discharge temp. TD3 error
F3	P19	Outdoor unit	4-way valve inverse error
F4	P20	Outdoor unit	High-pressure inverse error
F6	P22	IPDU	Outdoor fan IPDU error

Check code		Alarm Unit	Alarm Description
Hexadecimal Number	Remote Controller Display		
FA	P26	IPDU	G-Tr short circuit protection error
FD	P29	IPDU	Comp position detection circuit error
FE	P30	Indoor unit	Group terminal unit error
FF	P31	Indoor unit	Follower indoor unit error (Group error)
FFFF(-1)	-	I/F	I/F Error in the communication of BMS-IFMB0TLR-E device with the Indoor unit
FFFF(-2)	-	I/F	The BMS-IFMB0TLR-E has temporarily stopped communicating because the indoor unit or wired remote controller transmitted the system stop command.
FFFF(-4)	-	I/F	The BMS-IFMB0TLR-E is performing the initialization process.
FFFF(-5)	-	I/F	The BMS-IFMB0TLR-E has stopped communicating because the indoor unit switched to the low-power-consumption mode.

In case you detect an error code not listed, contact your nearest Toshiba technical support service.
